Hoof measurements are important for gauging your horse's progress as he/she transitions to healthy hooves. These measurements can also be used to fit for temporary hoof boots. Please measure your horse's hooves after the first trim, and then monthly (each time, after a new trim). Record these measurements on this form, and show these measurements to your hoofcare provider.

How to measure: Measure all four feet at the widest part for length and width (drawing right). Make note of any special details, as in backing up of the toe for rotation. Measure to 1/8 inch accuracy, using an accurate tape measure such as a carpenter's tape measure with a lip edge.
